EXPLORATORY TEST REPORT	
Author: Natalia Piska	**Document version [unique ID]:** ST3
	Date [created or last modified]: 17.04.2023r

App. Name and link:
https://testujpl.gitlab.io/pomodoro-kanban-test/

Test environment [description]:
Windows 11 Home,
przeglądarka: Google Chrome Wersja 112.0.5615.121

Session duration:
90 minutes

Time to prepare the environment and design tests: 10 min	**Testing time:** 90min	**Reporting time:** 15min

The idea of exploration [what will be tested]:
- whether there can be only 1 task in the INPROGRESS column at a time.
- whether the tomato grows with the passage of time
- whether the tomato is added to collected tomatoes after the time has elapsed
- whether the total number of tomatoes collected is always visible on the screen
- if the user wants to interrupt the task, the message "Are you sure you want it" will appear
- whether clicking YES on the message will restart the clock and the tomato will not be added to the previously collected tomatoes
- whether clicking NO on the message will not cause any changes
- is it possible to move the task back to TODO after exceeding 10 seconds from the start of the clock (after dragging the task to INPROGRESS)

Percentage of idea implementation [test completeness achieved]: 100%

Defects:	Issues [ambiguities, doubts]:
ST31: The task is in the INPROGRESS column, click to terminate the task (after 10 seconds), do not click on any of the YES or NO buttons, click outside the message window. The task is canceled automatically, the clock restarts, the growing tomato disappears. Attached: filmST31	There is no specific way for the user to interrupt the task, whether by pressing the "stop" button, "cancel" (when the 10 seconds have passed), or by drag&drop from the INPROGRESS column to the TODO column. Will canceling a task via drag&drop also display the "are you sure you want this" message
